Perfectly Clear® for Photography

Perfectly Clear® is award-winning and multi-patented technology, available for license that utilizes the physics principles of light. It's the only technology that automatically and instantly optimizes the lighting for each and every pixel while maintaining true color and zero clipping. At the same time Perfectly Clear will automatically remove abnormal tints and restore faded photographs. As the final touch, Perfectly Clear utilizes patented medical imaging technology to provide photographs with optimal contrast and sharpening.

The result is vibrant and accurate photographs that yield what the photographer actually saw when capturing the image - The Real World... Perfectly Clear®.

Perfectly Clear...the world's fastest, smallest, most accurate, & most beautiful correction. Experience the power of digital.

# Athentech Makes it Perfectly Clear

Perfectly Clear Pro is a "feature-rich" 16-bit image correction software that is powered by imaging technology from Athentech and its partners Bibble, FotoNation, Imagenomic and Tribeca Imaging, and the product is covered by more than 10 patents and patents pending. It performs a long list of tasks – it automatically corrects exposure, image depth and sharpness, optimizes color vibrancy, restores color fidelity, eliminates red-eye and abnormal tints, and reduces image, among others. They include support for more than 80 raw file formats, a unique "soft" portrait setting, a vivid color setting and powerful noise reduction controls, Athentech claims.

Introduced last fall at Photokina, Perfectly Clear Lab v2.0 is a hot-folder software application that allows for fully automatic, fast image correction that offers users several new patented features and capabilities not available in the original version 1.0. The technology is currently featured in products from KIS/Photo-Me Group, Albumprinter, Express Imaging, Lucidiom, muvee Technologies, Pixology, Simple Star, PhotoNation, and SeeFile Software.
