Paper	Silver halide or digital photo paper - your choice!

### How it's Made

The Express Photobook Maxi is a quality photobook product perfect for retailers looking to provide products as individual as the customers that create them. Collated and creased photographs are automatically collected and glued to a paper board backing in perfect register. Expressly chosen for silver halide prints the Express Maxibook Maker uses a cold vinilic glue; the amount and the density of the glue can be customized. An operator rotates the page 180 degrees and places the next set of paper boards into position. A unique moving table design is capable of assembling books up to 50mm (2 inches) thick in two minutes.

### Express Maxi Photobook Maker
